

Dear Hiring Manager,

I am a computer engineer. I graduated from the German university in Cairo in 2020.

During the last few years I worked with Egyptians, Germans, Americans, Indians and so many nationalities. I did my bachelor project in HTW Berlin in 2019. Then, I joined Nodogoro in 2020 as full stack engineer, Nodogoro is an outsourcing company which was a great experience for me because every project was in a new company in a new country with so many different nationalities. Then, I joined the Egyptian air forces as an officer engineer to do my military service and this is my current position now. It was a new experience for me to work with such sensitive data. I learned how to be confident and so careful at the same time and I learned also how to be a team leader and how to lead a whole office technically and non technically.

In Nodogoro I worked with MERN stack technology. I have built video chat applications, online shopping applications and many other applications. In the Egyptian air forces I work with dot net technology, it is a little bit old but it is the one used in Egypt, but I gained a great experience in SQL as I am making very complex queries to handle this enormous amount of data. I wanted to invest my time during the military service so I am doing a masters in machine learning at the German university in Cairo which I will accomplish by the time I am done with my military service in March 2023.

I still have a lot to write but I am trying to be brief, my resume includes all my experiences and my email. I am looking forward to hearing from you, as this is literally my dream job.

Sincerely,
Omar
